

Hand Hygiene in Focus.

MICROSHIELD® Product Catalogue

In the everyday business of healthcare, no instrument is more in focus than the human hand.

From what we know today, our hands represent the greatest risk for the transmission of pathogens. The World Health Organisation (WHO) considers the hands to be a major source for the spread of hospital acquired infections and in 2009 published the WHO Guidelines on Hand Hygiene in Health Care.

As a result, increasing emphasis and awareness has been placed on the importance of proper hand hygiene, which includes hand washing, hand disinfection and surgical hand preparation.

MICROSHIELD® has been a trusted partner in healthcare for more than 25 years. Providing a full range of hand and skin hygiene products from routine hand wash solutions to alcohol based hand rubs and surgical hand washes, MICROSHIELD® is well recognised in many

hospitals, day surgeries, GP clinics, medical centers, aged care and dental facilities throughout Australia and New Zealand.

Today, MICROSHIELD® joins schülke, a leading chemical and pharmaceutical company specialising in hygiene and infection prevention. For over 125 years, the schülke philosophy has been centred on one concept: hygiene. schülke's mission is to fight disease and contamination before they emerge and this positions MICROSHIELD® well for the future with a continued commitment to customers, bringing innovation and new products to market and most of all, reducing the risk of infection to those who are most vulnerable.
